Professional Summary

- Backend Engineer with 6 years of experience designing APIs, asynchronous jobs, and data services for SaaS platforms.
- Skilled in Go, Python, PostgreSQL, Redis, Kafka, Docker, and cloud-native service development.
- Experienced in improving service reliability, observability, and performance for production workloads.

Skills

Backend:

Go, Python, REST APIs, gRPC, Microservices

Databases:

PostgreSQL, Redis, MongoDB

Messaging:

Kafka, RabbitMQ

Cloudanddevops:

AWS, Docker, Kubernetes, GitHub Actions

Practices:

System Design, Observability, Unit Testing, Code Reviews

Work Experience

Backend Engineer at HarborPoint Software

Boston, USA | Jan 2021 - Present

- Designed Go services for account provisioning, billing events, and notification delivery.
- Improved API latency by adding Redis caching and optimizing PostgreSQL indexes.
- Introduced structured logging and service metrics to simplify production troubleshooting.

Software Developer at BeaconStack Labs

Cambridge, USA | Jun 2018 - Dec 2020

- Built Python APIs for workflow automation and customer data processing.
- Implemented Kafka consumers for asynchronous reporting and data synchronization tasks.
- Created integration tests for core service contracts and release validation.

Projects

Billing Event Router

Tech Stack: Go, Kafka, PostgreSQL, Docker

Built an event routing service for billing updates, retries, audit logs, and downstream notifications.

Account Provisioning API

Tech Stack: Go, gRPC, Redis, Kubernetes

Developed a provisioning API with caching, permission checks, and service-level metrics.

Education

B.S. in Computer Science - Northeastern University

Boston, USA | 2014 - 2018

Certifications

- Go Backend Development Certification
- AWS Certified Developer - Associate
