Professional Summary

- DevOps Engineer with 4 years of experience automating CI/CD pipelines, cloud infrastructure, and container deployments.
- Skilled in AWS, Docker, Kubernetes, Terraform, Jenkins, GitHub Actions, and production monitoring.
- Focused on repeatable deployments, secure infrastructure, and reliable developer workflows.

Skills

Cloud:

AWS, GCP basics

Infrastructure:

Terraform, CloudFormation, Linux

Containers:

Docker, Kubernetes, Helm

Cicd:

Jenkins, GitHub Actions, GitLab CI

Monitoring:

Prometheus, Grafana, CloudWatch

Work Experience

DevOps Engineer at SkyHarbor Cloud

Busan, South Korea | Jan 2023 - Present

- Built CI/CD pipelines for containerized backend services using Jenkins and GitHub Actions.
- Provisioned AWS infrastructure with Terraform modules for ECS, RDS, and VPC resources.
- Improved service observability by adding Grafana dashboards and actionable alerts.

Cloud Operations Associate at SeoulStack Systems

Seoul, South Korea | Aug 2020 - Dec 2022

- Supported production deployments, environment configuration, and server maintenance.
- Automated log rotation, backup validation, and access review tasks with Bash scripts.
- Assisted migration of monolithic services to Docker-based deployments.

Projects

Terraform Service Modules

Tech Stack: Terraform, AWS ECS, RDS, CloudWatch

Built reusable Terraform modules for deploying application services with monitoring and database resources.

Container Release Pipeline

Tech Stack: Docker, Jenkins, GitHub Actions, Helm

Created a release pipeline for building, scanning, and deploying Docker images to Kubernetes.

Education

B.Sc. in Computer Engineering - Pusan National University

Busan, South Korea | 2016 - 2020

Certifications

- AWS Certified Solutions Architect - Associate
- Docker Certified Associate
