Professional Summary

- Application Security Engineer with 6 years of experience securing web applications, APIs, and cloud environments.
- Skilled in threat modeling, secure code review, penetration testing, SAST/DAST tooling, and developer enablement.
- Experienced in reducing vulnerability backlogs and embedding security practices into software delivery.

Skills

Applicationsecurity:

Threat Modeling, Secure Code Review, OWASP Top 10

Testing:

Penetration Testing, SAST, DAST, API Security Testing

Tools:

Burp Suite, Semgrep, Snyk, OWASP ZAP

Cloudsecurity:

AWS IAM, Container Security, Secrets Management

Languages:

Python, JavaScript, Bash

Work Experience

Application Security Engineer at SecureWave Technologies

Paris, France | May 2021 - Present

- Led threat modeling workshops for payments, identity, and reporting services.
- Reduced critical vulnerability backlog by 54% through prioritization and engineering partnership.
- Integrated SAST and dependency scanning checks into CI pipelines.

Security Consultant at RedLock Advisory

Lyon, France | Sep 2018 - Apr 2021

- Performed web application penetration tests for finance and healthcare clients.
- Prepared remediation reports mapped to OWASP Top 10 and business risk.
- Created secure development training materials for client engineering teams.

Projects

API Security Review Toolkit

Tech Stack: Python, Postman, OWASP ZAP, JWT

Built a checklist-driven toolkit for testing authentication, authorization, and input validation.

CI Vulnerability Gate

Tech Stack: Semgrep, Snyk, GitHub Actions, Docker

Implemented automated code and dependency scanning with severity-based build rules.

Education

M.Sc. in Cybersecurity - EPITA School of Engineering and Computer Science

Paris, France | 2016 - 2018

Certifications

- GIAC Web Application Penetration Tester
- CompTIA Security+
